

# Security Solutions

Many IT security teams spend much of their time focused on preventing a security breach. As a result, they implement a “reactive” rather than a “proactive” response where technology and processes require continuous monitoring and remediation.

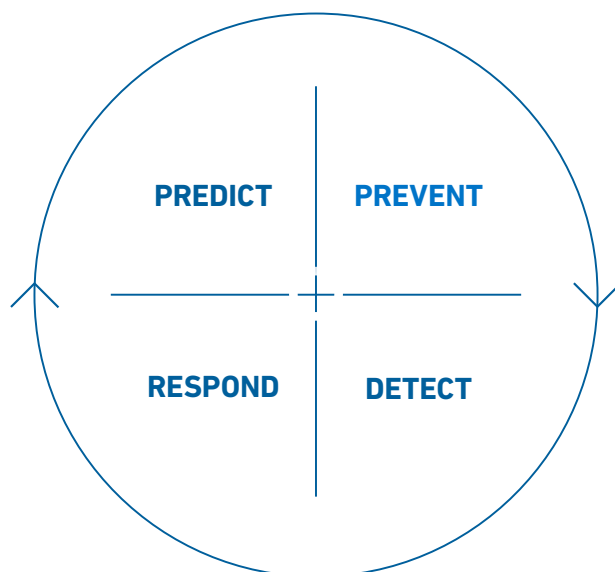

## YOUR CHALLENGES

- Are you concerned about the increase in security breaches?
- Are you worried about your data being breached?
- How protected is your infrastructure from internal and external threats?
- Are your user access rights secure?
- Are your users building the right security cultures in your organisation?
- Are you aware that the latest computer firmware and software often lack sufficient security and trustability to satisfy security requirements?
- Do you know that threats will exploit any infrastructure or system vulnerabilities that are at the core of your operations?

## • OUR SOLUTIONS

- Security Consulting – Be aware of the security gaps across your organisation that include people, processes and technologies. It is essential to identify and address areas where your security could be compromised now and in the future.
- Security Solutions – Developing appropriate safeguards to limit or contain the impact of a breach, through enhancing existing security practices or deploying new solutions to help secure your business from insider threats and external attacks.
- Managed Security – Organisations need to detect and triage breaches before they can cause any damage. The monitoring of networks and systems is a constant fight against cyber-crime and insider threats.

Cloud Security Assessment  
 Cyber Risk Assessment  
 Security Compliance  
 Security Architecture  
 Security Training and Awareness

Cloud Security (CASB) – Secure Cloud  
 Identity and Access Management (IAM) – Secure EndPoint  
 Network Security – Secure Infrastructure

CSS Incident Response and Investigation  
 MFS Remediation

Cyber Security Service (CSS)  
 Managed Firewall Service (MFS)

## WHY WE CHOOSE IBM

SCC has partnered with IBM for almost 40 years; SCC bridges the gap between business needs and technology to deliver world-class solutions. We know IBM inside out, from its technology to its people and vision, and whatever we do together delivers the strongest, most agile solution.

SCC's CSS service is powered by IBM QRadar which is an enterprise class toolset which is recognised as a leader by multiple independent analyst firms, including being the Gartner Magic Quadrant Leader in SIEM for the last 8 years. SCC complement our multi-tenanted deployment of QRadar with a team of highly experienced security professionals and proven operational processes to deliver the same CSS service we deliver to Government organisations to our commercial clients, adopting the ISO27001 and NIST legislations as standard in every aspect of the service we provide. Built on years of experience SCC are able to significantly reduce both the time and cost of deployment by removing the need for complex professional services work to install and tune the tools, providing our clients quicker time to value.

## WHY SCC?

**Reduce Risk** - We have a suite of enterprise security services to help reduce security risk and the anxiety of security breaches.

**Collaborative Working** - Our qualified team of security professionals work with you to meet your requirements, from cloud to managed security.

**Compliance** - We deliver compliance to ISO and Cyber Essentials standards, ensuring your organisation follows best practices.

**Innovative** - We continually invest in our capabilities, delivering ever-more effective services that stay on top of the latest risks and threats to your information security.

**The Big Picture** - We get to know your people and processes to build a complete picture of requirements. This saves you the time, effort and money of acquiring insufficient tools and technology.

**Global** - Our international reach and strong global partnerships keep us relevant, and help us improve our security skills as needs evolve.
