

SCC and IBM for Sustainable IT

How smarter
sustainability reporting
enables better decisions,
a clear commitment,
and stronger business
outcomes

A smarter way to navigate your sustainability journey

Envizi's software automates the collection and consolidation of more than 500 data types and supports major sustainability reporting frameworks.

Its user-friendly visualisations and interface and easily customised dashboards enable you to analyse, manage and report on environmental goals, identify efficiency opportunities and assess sustainability risk. Envizi's solutions help streamline the management of these tasks as part of broader ESG reporting initiatives, while also providing valuable sustainability insights to inform business strategy.

Emissions Management

Accurately calculate and report GHG emissions and track progress towards decarbonization goals

Simplify your GHG reporting with emissions management software

IBM® Envizi™ Emissions management software form integrates a suite of products that help accurately calculate, track and report on your Scope 1, 2 and 3 greenhouse gas (GHG) emissions data at a granular level.

Key features include:

- Reporting on all GHGs including CO₂, CH₄, N₂O, HFCs, PFCs, SF₆, NF₃
- Custom emissions factors
- Currency and metric conversions
- Market and location-based emissions reporting

ESG Reporting software

Streamline ESG reporting to meet compliance and reporting requirements.

Capture your ESG data in a single system of record with ESG reporting software

ESG reporting software from IBM® Envizi™ integrates a suite of products that help you capture and manage all your ESG data in a single system of record and report with confidence knowing that your data is auditable and finance-grade.

This is made possible by a powerful engine that automates ESG data capture and tracks performance over time, allowing you to meet your ESG reporting commitments easily.

- Access to multiple framework questions in one place such as ESRS to support CSRD reporting, GRI, SASB, SFDR, UN SDGs and TCFD
- Integrations with ENERGY STAR® and NABERS for scores and ratings
- Access to compliance and management reporting templates
- Single portal for value chain stakeholders to report their ESG metrics

Decarbonisation

Consolidate energy data and drive improved energy management across your organisation

Accelerate sustainability initiatives and improve emissions performance

IBM® Envizi™ The decarbonisation software products from support organizations on their journey to reduce emissions. This suite of products facilitates the ongoing monitoring, analysis, management and reporting of energy and emissions across large and complex organizations.

Planning and forecasting tools also enable users to conduct emissions planning and simulation, run optimization models, and carry out performance simulations.

Key features across the decarbonisation suite of products include:

- Visualization and reporting tools
- Integrated regression tools
- Planning and forecasting tools
- Alerting and issue management tools
- Automated data capture and validation

SCC and IBM - Responsible partners for sustainable business

With an incredible 40-year partnership, SCC is the UK's first IBM Platinum Business Partner. At SCC, we understand that modern business is about so much more than the bottom line. And that's why everything we do aligns with the 'four Ps':

- **People:** an inclusive, family business that champions diversity and puts people and customers first
- **Planet:** innovating and collaborating to reduce our environmental impact, and that of our customers
- **Prosperity:** giving back and supporting digital inclusion, and developing skills and opportunities
- **Principles:** acting with integrity, operating ethically, and partnering with suppliers who share our values, commitments and vision
