## N. Korean Hackers Use Fake Interviews to Infect Developers with Cross-Platform Malware

Threat actors with ties to North Korea have been observed targeting job seekers in the tech industry to deliver updated versions of known malware families tracked as BeaverTail and InvisibleFerret. The activity cluster, tracked as CL-STA-0240, is part of a campaign dubbed Contagious Interview that Palo Alto Networks Unit 42 first disclosed in November 2023. "The threat actor behind CL-STA-0240 contacts software developers through job search platforms by posing as a prospective employer," Unit 42 said in a new report.

## Critical Mozilla Firefox Zero-Day Allows Code Execution

Mozilla has patched a critical security vulnerability in its Firefox Web browser that's being actively exploited in the wild. Tracked as CVE-2024-9680, the vulnerability is a use-after-free issue in Animation timelines, with attackers exploiting it to execute arbitrary code, according to Mozilla's advisory. It carries a CVSSv3 vulnerability-severity rating of 9.8 out of 10 and a low attack complexity (no privileges or user interaction is needed to successfully exploit the flaw), and translates into high risk in the event of a successful attack.

TOP OF THE NEWS THIS WEEK

## Microsoft Detects Growing Use of File Hosting Services in Business Email Compromise Attacks

Microsoft is warning of cyber attack campaigns that abuse legitimate file hosting services such as SharePoint, OneDrive, and Dropbox that are widely used in enterprise environments as a defense evasion tactic.

The end goal of the campaigns are broad and varied, allowing threat actors to compromise identities and devices and conduct business email compromise (BEC) attacks, which ultimately result in financial fraud, data exfiltration, and lateral movement to other endpoints.

The weaponization of legitimate internet services (LIS) is an increasingly popular risk vector adopted by adversaries to blend in with legitimate network traffic in a manner such that it often bypasses traditional security defenses and complicates attribution efforts.

NEWS FROM AROUND THE WORLD

## Pro-Ukrainian Hackers Strike Russian State TV on Putin's Birthday

Ukraine has claimed responsibility for a cyber attack that targeted Russia state media company VGTRK and disrupted its operations, according to reports from Bloomberg and Reuters.

The incident took place on the night of October 7, VGTRK confirmed, describing it as an "unprecedented hacker attack." However, it said "no significant damage" was caused and that everything was working normally despite attempts to interrupt radio and TV broadcasts.

## China's Salt Typhoon Hacks AT&T and Verizon, Accessing Wiretap Data: Report

A sophisticated hacking group known as Salt Typhoon believed to be linked to China, has breached the systems of major U.S. telecom companies AT&T, Verizon, and Lumen Technologies, potentially compromising sensitive government data. This was reported by the Wall Street Journal raising significant national security concerns, as the attackers may have accessed systems used to handle court-authorized wiretapping—critical tools in tracking criminal and national security activities.

# Ransomware

## WEEKLY RANSOMWARE ROUNDUPS

## TOP THREAT ACTORS

### LockBit

LockBit is a ransomware-as-a-service (RaaS) group that has been active since September 2019. LockBit has developed several variants of ransomware products to perform encryption

### RansomHub

RansomHub, a new Ransomware-as-a-Service (RaaS) that has rapidly become one of the largest ransomware groups currently operating, is very likely an updated and rebranded version of the older Knight ransomware.

### BlackBasta

BlackBasta is a ransomware operator and Ransomware-as-a-Service criminal enterprise that first emerged in early 2022 and immediately became one of the most active RaaS threat actors in the world.

### Play

The group focuses on multi-extortion in that they encrypt target organizations' data, but also threaten to post the data to their public TOR-based sites.

### OVERVIEW

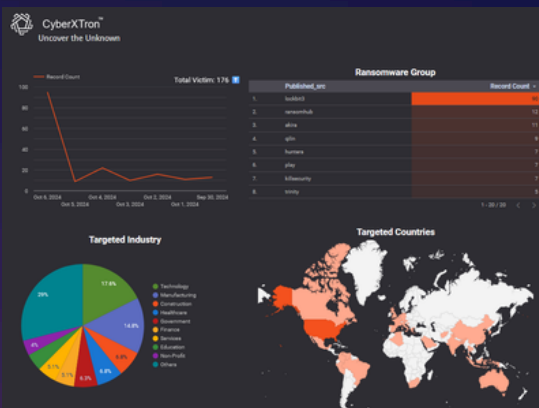

Last week we see Lockbit3 claim the most ransomware victims with 90 out of 176 (51%)

### TARGET INDUSTRIES

Last week saw the most ransomware attacks against the Technology and Manufacturing industries.

### TARGET COUNTRY

The United States has consistently held the top position as the primary target.

# Phishing

PHISHING NEWS THIS WEEK

## New Mamba 2FA bypass service targets Microsoft 365 accounts

An emerging phishing-as-a-service (PhaaS) platform called Mamba 2FA has been observed targeting Microsoft 365 accounts in AiTM attacks using well-crafted login pages.

Additionally, Mamba 2FA offers threat actors an adversary-in-the-middle (AiTM) mechanism to capture the victim's authentication tokens and bypass multi-factor authentication (MFA) protections on their accounts.

Mamba 2FA is currently sold to cybercriminals for \$250/month, which is a competitive price that positions it among the most alluring and fastest-growing phishing platforms in the space.

Mamba 2FA was first documented by Any.Run analysts in late June 2024, but [Sekoia reports](#) that it has been tracking activity linked to the phishing platform since May 2024. Additional evidence shows that Mamba 2FA has been supporting phishing campaigns since November 2023, with the kit being sold on ICQ and later on Telegram.

Following Any.Run's report of a campaign backed by Mamba 2FA, the operators of the phishing kit made several changes to their infrastructure and methods to increase the stealthiness and longevity of the phishing campaigns.
